ByPeek Privacy Policy

Last updated: 5 October 2026

ByPeek is an app by MarioDigital, Le Mairekade 77, 1013 CB Amsterdam, the Netherlands (Chamber of Commerce 42161876). Contact: support@mariodigital.eu.

ByPeek does not collect any personal data. The app has no server, no MarioDigital account, no ads, no analytics and no tracking.

- **Your API keys** are stored only on your phone, in the device's secure storage (Keychain on iOS, Keystore on Android). They are only sent to Bybit to fetch your balance. MarioDigital never sees them.
- **Your balance and transactions** go directly from Bybit to your phone and stay there. They are only used to show the app and the widget. If a ByPeek widget is on your home screen, or you turned on payment notifications, the app fetches your balance from Bybit in the background about every 15 minutes. This is only to update the widget, the low-balance warning and the payment notification. Your phone creates that notification itself. Nothing is sent to MarioDigital then either.
- **App lock:** if you turn it on, ByPeek asks for your fingerprint, face or phone PIN. Your phone handles this itself. ByPeek is only told whether unlocking succeeded and stores no code or biometric data.
- **Purchases** are handled by the App Store or Google Play. MarioDigital receives no payment details. The purchase feature of Google Play or Apple may itself process technical data about the purchase; Google's or Apple's privacy policy applies to that.
- **Filling in your key:** if you tap "Open Bybit" under Add account, ByPeek checks your clipboard when you return to the app. Only text that looks like a Bybit key or secret is filled in; the app then clears the clipboard. Anything else you copied is ignored and not stored. Outside this step-by-step guide ByPeek does not read your clipboard, except once when opening a shared link (see below).
- **Sharing with a family member:** the QR code or link contains the read-only key of the shared account, encrypted so that only ByPeek can read it. That data is in the part of the link after the #. Your browser does not send that part to our server, so mariodigital.eu never sees the key. If you open ByPeek via such a link right after installing, the app checks your clipboard once for the code. After importing it, the app clears the clipboard. ByPeek only uses the camera to scan such a QR code, and only after you allow it. Recognition happens on your phone itself; images are not stored or sent.

- **Bybit Card referral link:** if you tap "No Bybit Card yet?", your browser opens a page on mariodigital.eu with our referral code and a link to Bybit. That page uses no cookies and no tracking. Like any website, our web host may log technical data such as your IP address and the time. If you open a Bybit account through that link, MarioDigital may receive a fee from Bybit. Bybit's privacy policy describes what Bybit does with your data.
- **Report a problem:** this button opens your own mail app with technical details, such as the app version, operating system and error codes. Nothing reaches us unless you send the email yourself. Your API keys are never included.

Deleting the app removes all its data from your phone. Also revoke your API key at Bybit.

ByPeek is an independent app and not an official Bybit product. Bybit's own privacy policy applies to how Bybit handles your data.
